

HELA ADJUST is an adjustable-length aircraft lanyard. It's intended to be used as a restraint device to limit operators' movement while traveling inside of helicopters or aircraft.

HELA ADJUST's unique design and materials give it great strength with an adjustable length. Users can make one-handed adjustments, tightening with a easy low-friction pull and loosening with a flick of the adjuster. This lanyard features an end loop ready to be girth hitched to the user's belt or to the supplied ISC SH901 double-action snaphook. The other end features a super heavy-duty Ronstan RF6300 Quick-Release snap shackle with an easy grab short leash.
